

RGB Mileage User Guide

Version 2.0.9 - 2026-06-04

Quick Fuel Entry

- Enter Odometer and Gallons.
- Miles appears as a visible field.
- Miles auto-calculates when a previous fuel entry exists.
- Miles can be manually entered or overridden.
- MPG calculates automatically from Miles divided by Gallons.

Historical Recalculation

- If an older fuel entry is added later, the app checks the next fuel entry.
- If the new entry changes the next entry's Miles value, the app asks whether to update it.
- If accepted, MPG recalculates automatically.

Photos and Backups

- Photos are optimized when added.
- The longest side is limited to 1200 px.
- The app stores the optimized image only.
- JSON backup shows a summary before export.

Backup Compatibility

- Restore compatibility is required for RGB Mileage v2.0.6 and later.
- Compatibility with versions earlier than v2.0.6 is not required.
