

RGB Mileage Tracker User Guide

Version 1.0

Overview

RGB Mileage Tracker is a private browser-based Progressive Web App for tracking fuel mileage, maintenance, ownership information, and insurance information for up to two vehicles. It is designed to run in Safari and can be added to the iPhone Home Screen.

Home Screen

The Home Screen displays two large vertical vehicle circles. A vehicle with a photo shows the photo. A vehicle without a photo shows its custom or generated badge. An empty slot shows a plus sign. Tap an occupied vehicle card to open fuel entry. Long press an occupied card to manage it. Tap an empty card to add a vehicle.

Vehicle Profile

Vehicle profiles include photo, year, make, model, optional display badge, purchase date, purchase cost, insurance company, policy number, effective date, expiration date, insurance value, and insurance attachments.

Fuel Tracking

Fuel entries include date/time, odometer, miles, gallons purchased, fuel grade, fuel type, station, MPG, and notes. Fuel grade options are 87, 89, 90, 91, 93, and Other. Fuel type options are Contains Ethanol and Non-Ethanol. Miles are calculated from odometer readings when a previous entry exists. MPG is calculated as Miles divided by Gallons Purchased and shown to two decimals.

Station Management

Default stations are Murphy USA, Circle K, refuel, BP, and Shell. Selecting Other allows a new station name to be entered. The user can add it to future dropdowns or use it for that entry only. Editing a station updates all historical entries using that station. Deleting a station removes it from future dropdowns but does not change history.

Fuel History

Fuel history is shown newest first. Each entry may be edited or deleted. Editing does not change the original date/time. If an older entry is edited or deleted, affected future entries are recalculated.

Maintenance

Maintenance records include drop off date, pick up date, location, category, odometer, cost, notes, and attachments. Categories include Maintenance, Repair, Oil Change, Brakes, Tires, Cooling System, Electrical, Fuel System, Transmission, Engine, Suspension, Body, and Other.

Reports and Statistics

Reports can be filtered by all vehicles or individual vehicle and by All Time, YTD, Previous Week, Previous Month, Previous Year, or Manual Range. Statistics include miles, gallons, average MPG, fill-ups, best MPG, worst MPG, ethanol versus non-ethanol results, fuel grade comparisons, ownership statistics, and charts.

Data Management

Export creates a JSON backup of all app data. Import restores a previous JSON file. Backup/Restore uses the same JSON backup approach and records the last backup date when a backup is created.

Documentation Standard

Every future release must include an updated versioned README, User Guide, Change Log, and ZIP package. The in-app version number must match all documentation and package names.
