

RGB Mileage Tracker User Guide

Version 1.0.1

RGB Mileage Tracker is a private Progressive Web App for tracking vehicle fuel economy, maintenance records, insurance information, ownership statistics, and reports.

Home Screen

The Home Screen displays two large vertical vehicle circles. A circle shows a vehicle photo, custom badge, auto-generated badge, or a plus sign for an empty vehicle slot.

- Single tap an occupied vehicle card to open fuel entry.
- Long press an occupied vehicle card for Open, View Statistics, Edit Vehicle, Change Photo, Delete Vehicle, and Cancel.
- Single tap an empty vehicle card to add a vehicle.
- The app displays the current version number at the bottom of the Home Screen.

Vehicle Profile

- Vehicle Photo
- Year, Make, Model
- Display Badge
- Purchase Date and Purchase Cost
- Insurance Company, Policy Number, Effective Date, Expiration Date, Insurance Value
- Insurance attachments in PDF, JPG, or PNG format

Fuel Entry

- Date and time are generated when the entry is saved.
- Odometer is manually entered.
- Miles are calculated from the current odometer minus the previous odometer. If no previous odometer exists, Miles may be entered manually.
- Gallons Purchased is manually entered.
- MPG is calculated as Miles divided by Gallons Purchased and rounded to two decimals.
- Fuel Grade options: 87, 89, 90, 91, 93, Other.
- Fuel Type options: Contains Ethanol and Non-Ethanol.
- Station dropdown includes Murphy USA, Circle K, refuel, BP, Shell, Other, and user-added stations.

Location Capture

Location detection is manual only. The app never captures location automatically when the fuel entry screen opens.

- Tap Use Current Location to request GPS permission and search for the nearest address.
- If a station is detected, the app asks: Use This Station?

- Yes populates Station and Location, then asks whether to Add To Station Drop Down List.
- Location Only populates Location and does not change Station.
- Cancel makes no changes.
- If no station is detected, the app asks whether to use the detected location.
- Clear Location removes the address, latitude, and longitude without changing Station.

Station Management

- Selecting Other allows a station name to be entered.
- The user can add that station to the dropdown or use it for only the current entry.
- Editing a station updates all historical entries using that station.
- Deleting a station removes it from the dropdown but leaves historical entries unchanged.

Fuel History

- Fuel history is newest first.
- Each entry shows date, odometer, miles, gallons, fuel grade, fuel type, station, location, MPG, and notes.
- Historical entries may be edited or deleted.
- Editing does not change the original date/time.
- Changing or deleting older entries recalculates future miles and MPG.

Maintenance

- Drop Off Date
- Pick Up Date
- Location
- Category
- Odometer
- Cost
- Notes
- Photos or receipts

Maintenance categories include Maintenance, Repair, Oil Change, Brakes, Tires, Cooling System, Electrical, Fuel System, Transmission, Engine, Suspension, Body, and Other.

Vehicle Statistics

- Vehicle information and insurance information
- Ownership statistics including total maintenance cost, total invested, and maintenance cost per mile
- Fuel statistics including total miles, gallons, lifetime MPG, best MPG, worst MPG, and number of entries
- Most frequent station and location
- Charts for MPG over time and MPG by fuel type

Reports

- Reports may be run for all vehicles or individual vehicles.
- Date filters include All Time, YTD, Previous Week, Previous Month, Previous Year, and Manual Range.
- Reports include total miles, gallons, average MPG, fill-ups, best MPG, worst MPG, fuel type comparisons, fuel grade comparisons, station summaries, and location summaries.

Data Management

- Export Data creates a JSON export file.
- Import Data restores a previously exported JSON file and replaces current app data.
- Backup / Restore creates or restores a full local backup.
- Back up regularly because data is stored locally on the device.

Versioning

Every release must include a versioned README, User Guide, Change Log, ZIP package, and matching in-app version number.
